

SUPERCLOSET®

5x5 LED
SUPERROOM

INSTRUCTION MANUAL

WELCOME TO THE FAMILY

**Congratulations, and thank you for choosing SuperCloset.
You now have the world's best grow room.**

These instructions will guide you through the process of setting up your **SuperRoom**. Please read through the **entire** instruction manual before you begin, including any and all instructions that come with the individual components.

Lets take a look at the layout and components of your SuperRoom.

Let's start with unpacking the SuperCloset...

- 1** Unpack the pallet and boxes that your SuperRoom came in and lay out in an organized pile.
- 2** Once all items are unpacked, reference your quality assurance checklist to verify that you have all the contents of your SuperRoom.
- 3** Make sure you have planned accordingly to ensure you have the proper amount of power and properly sized breakers going to your SuperRoom. Always consult a professional electrician when setting up and planning your electrical configuration.

Prior to setup, make sure you have all of the necessary components by cross referencing the QAC (Quality Assurance Checklist). Take this time to familiarize yourself with each of the components.

We are now ready to set up the SuperRoom

Make sure you assemble the tent in its final location, as it will be difficult to move when fully assembled. We will not be plugging in any of the components just yet. Let's get everything in place first.

SUPER GROW TIP:

Use masking tape and a marker to label the power cords of your components at the plug to help identify your components later in the assembly.

Gorilla Grow Tent set up

1. Assemble your Gorilla Grow Tent according to the manufactures included setup instructions (image a). Determine ahead of time if you are able to assemble as a standard 6' 11" tall tent, or if you are able to maximize your space and go with the 7' 11" tall configuration.
2. Once your tent is assembled, double check to make sure that all fittings are installed properly including your ceiling support poles (image b).

Hanging Carbon Filter and Inline Fan

NOTE:

The inline fan will be pulling air from inside the tent, through the carbon filter, ensuring the air leaving the tent is free of odors and aromas. It is important to note the direction of the fan's airflow when installing (image c).

1. Locate the carbon filter (image a). Slide on the pre-filter and secure with included elastic bands.
2. Locate and unpack the inline fan (image b).
3. Attach the mounting bracket and hang the inline fan from the roof support crossmember (image d) and secure with zip tie.
4. Locate the two black filter hanging straps. Loop the straps around the roof support crossmember (image e). Slide the carbon filter through the loops and tighten securely (image f).
4. Position the carbon filter over the end of the inline fan and secure with included duct tape (image g).
5. Locate the ducting and hose clamp. Slide the hose clamp over the end of the ducting and attach the ducting to the open end of the inline fan (image h). Tighten the hose clamp securely and feed the open end of the ducting through the desired ducting port (image i). Tighten the dual-cinching ports around the ducting when done.

Carbon Filter & Fan Diagram

The Inline Fan will be pulling air from inside the tent, through the Carbon Filter, ensuring that your exhaust is free of odors and aromas.

Hanging your LED Light

1. Locate your Yo-Yo light hangers (image a).
2. Loop the carabiner end over the top support of the tent and clip it to itself (image b). To adjust height, pull on the loose string to raise the Yo-Yo or press the button on the side of the Yo-Yo hanger to lower.
3. Unpack your KIND LED Grow Light(s).
4. Locate your the Wire Hangers (image c). Connect the wire hangers to each of the metal hangers on the light (image d).
5. Place the Kind LED Light in the bottom of the tent. Lower the Yo-Yo system until you can connect the other ends of the cable assemblies to the Yo-Yo carabiners (image e). Raise the light to the desired height using the loose end of the Yo-Yo hanger cord.
6. Run the power cord from the LED light through the nearest electrical port hole.

Thermometer/Hydrometer/ICF

1. Locate the Thermometer/Hydrometer (image e). Remove the battery cover and remove the plastic safety blocker from the battery terminal. You can be creative on where you would like this placed inside the tent, but the easiest placement is inside the tool pouch on the inside of the tent.
2. Run the external probe to the outside of the tent, through the nearest ducting port. Make sure the probe is not touching any surface on the outside of the tent as this will provide false readings.
3. Locate the Clip-On Active Air Fan (image f). Clip the fan to any one of the inside corner vertical poles. The fan is designed to provide circulation and air movement.

Grow System set up

Thoroughly read and follow the instructions included with your chosen grow system. If you opted for the soil method, simply arrange the included pots and plastic trays in an orderly manner.

Bubble Flow Buckets

Super Flow

NOTE:

The Reservoir for the Bubble Flow Buckets is placed on the outside of the tent. This will help to keep the water at a desirable temperature and allow you access to the Reservoir without disturbing your grow environment. This arrangement may require notching small openings for your fill and drain lines to pass through the wall of the tent. For proper operation of the Bubble Flow Buckets, all drain lines must be completely level from the buckets to the Reservoir to ensure proper draining.

Make sure you have installed the spill tray included with your Gorilla Grow Tent prior to setting up the grow system in your tent

Soil Pots

Final Assembly

1. Locate the power strip (image a), the GFCI Protector (image b), the Smart Plug(s) (image c), the 3-IN-1 adapter (image d), and the inline fan controller (image e).

DO NOT PLUG IN THE POWER STRIP YET.

2. Plug in the following from left to right:
 - 1) Inline Fan
 - 2) Internal Circulation Fan

Plug the 3-IN-1 adapter in the far plug on the power strip

- 3) Plug the first Smart Plug in and then the Kind LED light into the Smart Plug
- 4) Air Pump (**Hydro Only**)
- 5) Plug the second Smart Plug in and then the Water Pump into the Smart Plug (**Hydro Only**)

Properly configured Power Strip Should look like this

a

b

c

d

e

Almost Done

1. Plug the GFCI Protector (image a) into any 110v wall socket. With the power strip turned OFF, plug the power strip into the GFCI Protector.

NOTE: DO NOT POWER UP YOUR SUPERROOM YET!

2. Now that everything is plugged into the power strip, lets verify some important steps:

- 1) *LED Light is properly hung.*
- 2) *Watering System tube is securely fastened to the top of the Water Pump. (Hydro Only)*
- 3) *Reservoir is filled with water and Water Pump is fully submerged. (Hydro Only)*
- 4) *Air Pump is next to (NOT IN!) the reservoir. (Hydro Only)*
- 5) *Light Power Cord is plugged into Smart Plug#1.*
- 6) *Water Pump Power Cord is plugged into Smart Plug #2. (Hydro Only)*
- 7) *Power Strip is off and plugged into the GFCI Protector.*

3. After verifying all of the above, it's time to turn on your SuperRoom. Turn the power strip switch to the ON position, and the system should spring to life before your very eyes!
